(54) Title: DRIVING ARRANGEMENT FOR A PASSIVE MATRIX SELF-EMITTING DISPLAY ELEMENT

(57) Abstract: This invention relates to a driving arrangement for voltage driving of a passive matrix self-emitting display element (1), the driving arrangement comprising: voltage application circuitry (3) for applying a voltage across said self-emitting display element (1), switching devices (4) for switching said voltage between an on and an off state, a charge monitoring unit (5) for monitoring a total charge delivered to said self-emitting display element (1) due to said voltage application circuitry (3) during a drive cycle, and feedback circuitry (9) being arranged to switch said switching devices (4) to the off state, when a predetermined total charge has been delivered to said self-emitting display element (1) by said voltage application circuitry (3) during the drive cycle. The invention also relates to a method of driving such a display element (1), as well as a passive matrix self-emitting display device, comprising a plurality of such light emitting elements (1).
